Privacy Policy

We created this Privacy Policy (version 01.01.1970-121454831), to declare which information we collect, how we use data and which options the users of our website have, according to the guidelines of the [General Data Protection Regulation \(EU\) 2016/679](#)

Unfortunately, these subjects sound rather technical due to their nature, but we have put much effort into describing the most important things as simply and clearly as possible.

Automatic Data Retention

Every time you visit a website nowadays, certain information is automatically created and saved, just as it happens on this website.

Whenever you visit our website such as you are doing right now, our webserver (computer on which this website is saved/stored) automatically saves data such as

- the address (URL) of the accessed website
- browser and browser version
- the used operating system
- the address (URL) of the previously visited site (referrer URL)
- the host name and the IP-address of the device the website is accessed from
- date and time

in files (webserver-logfiles).

Generally, webserver-logfiles stay saved for two weeks and then get deleted automatically. We do not pass this information to others, but we cannot exclude the possibility that this data will be looked at in case of illegal conduct.

Cookies

Our website uses HTTP-cookies to store user-specific data. For your better understanding of the following Privacy Policy statement, we will explain to you below what cookies are and why they are in use.

What exactly are cookies?

Every time you surf the internet, you use a browser. Common browsers are for example Chrome, Safari, Firefox, Internet

Explorer and Microsoft Edge. Most websites store small text-files in your browser. These files are called cookies.

What should not be dismissed, is that cookies are very useful little helpers. Nearly all websites use cookies. More accurately speaking these are HTTP-cookies, since there are also different cookies for other uses. http-cookies are small files which our website stores on your computer. These cookie files are automatically put into the cookie-folder, which is like the “brain” of your browser. A cookie consists of a name and a value. Moreover, to define a cookie, one or multiple attributes must be specified.

Cookies save certain parts of your user data, such as e.g. language or personal page settings. When you re-open our website, your browser submits these “user specific” information back to our site. Thanks to cookies, our website knows who you are and offers you the settings you are familiar to. In some browsers every cookie has its own file, in others such as Firefox, all cookies are stored in one single file.

There are both first-party cookies and third-party cookies. First-party cookies are created directly by our site, while third-party cookies are created by partner-websites (e.g. Google Analytics). Every cookie is individual, since every cookie stores different data. The expiration time of a cookie also varies – it can be a few minutes, or up to a few years. Cookies are no software-programs and contain no computer viruses, trojans or any other malware. Cookies also cannot access your PC’s information.

This is an example of how cookie-files can look:

name: _ga

value: GA1.2.1326744211.152121454831-9

purpose: differentiation between website visitors

expiration date: after 2 years

A browser should support these minimum sizes:

- at least 4096 bytes per cookie
- at least 50 cookies per domain
- at least 3000 cookies in total

Which types of cookies are there?

What exact cookies we use, depends on the used services. We will explain this in the following sections of the Privacy Policy statement. Firstly, we will briefly focus on the different types of HTTP-cookies.

There are 4 different types of cookies:

Essential Cookies

These cookies are necessary to ensure the basic function of a website. They are needed when a user for example puts a product into their shopping cart, then continues surfing on different websites and comes back later in order to proceed to the checkout. Even when the user closed their window priorly, these cookies ensure that the shopping cart does not get deleted.

Purposive Cookies

These cookies collect info about the user behavior and record if the user potentially receives any error messages. Furthermore, these cookies record the website's loading time as well as its behavior within different browsers.

Target-orientated Cookies

These cookies care for an improved user-friendliness. Thus, information such as previously entered locations, fonts or data in forms stay saved.

Advertising Cookies

These cookies are also known as targeting-Cookies. They serve the purpose of delivering individually adapted advertisements to the user. This can be very practical, but also rather annoying.

Upon your first visit to a website you are usually asked which of these cookie-types you want to accept. Furthermore, this decision will of course also be saved in a cookie.

How can I delete cookies?

You yourself take the decision if and how you want to use cookies. Thus, no matter what service or website cookies are from, you always have the option to delete, deactivate or only partially allow them. Therefore, you can for example block cookies of third parties but allow any other cookies.

If you want change or delete cookie-settings and would like to determine which cookies have been saved to your browser, you can find this info in your browser-settings:

[Chrome: Clear, enable and manage cookies in Chrome](#)

[Safari: Manage cookies and website data in Safari](#)

[Firefox: Clear cookies and site data in Firefox](#)

[Internet Explorer: Delete and manage cookies](#)

[Microsoft Edge: Delete cookies in Microsoft Edge](#)

If you generally do not want to allow any cookies at all, you can set up your browser in a way, to notify you whenever a potential cookie is about to be set. This gives you the opportunity to manually decide to either permit or deny the placement of every single cookie. The settings for this differ from browser to

browser. Therefore, it might be best for you to search for the instructions in Google. If you are using Chrome, you could for example put the search phrase “delete cookies Chrome” or “deactivate cookies Chrome” into Google.

How is my data protected?

There is a “cookie policy” that has been in place since 2009. It states that the storage of cookies requires the user’s consent. However, among the countries of the EU, these guidelines are often met with mixed reactions. In Austria the guidelines have been implemented in § 96 section 3 of the Telecommunications Act (TKG).

If you want to learn more about cookies and do not mind technical documentation, we recommend <https://tools.ietf.org/html/rfc6265>, the Request for Comments of the Internet Engineering Task Force (IETF) called “HTTP State Management Mechanism”.

Storage of Personal Data

Any personal data you electronically submit to us on this website, such as your name, email address, home address or other personal information you provide via the transmission of a form or via any comments to the blog, are solely used for the specified purpose and get stored securely along with the respective submission times and IP-address. These data do not get passed on to third parties.

Therefore, we use personal data for the communication with only those users, who have explicitly requested being contacted, as well as for the execution of the services and products offered on this website. We do not pass your personal data to others without

your approval, but we cannot exclude the possibility this data will be looked at in case of illegal conduct.

If you send us personal data via email – and thus not via this website – we cannot guarantee any safe transmission or protection of your data. We recommend you, to never send confidential data via email.

Rights in accordance with the General Data Protection Regulation

You are granted the following rights in accordance with the provisions of the [GDPR](#) (General Data Protection Regulation) and the Austrian [Data Protection Act \(DSG\)](#):

- right to rectification (article 16 GDPR)
- right to erasure (“right to be forgotten”) (article 17 GDPR)
- right to restrict processing (article 18 GDPR)
- right to notification – notification obligation regarding rectification or erasure of personal data or restriction of processing (article 19 GDPR)
- right to data portability (article 20 GDPR)
- Right to object (article 21 GDPR)
- right not to be subject to a decision based solely on automated processing – including profiling – (article 22 GDPR)

If you think that the processing of your data violates the data protection law, or that your data protection rights have been infringed in any other way, you can lodge a complaint with your respective regulatory authority. For Austria this is the data protection authority, whose website you can access at <https://www.data-protection-authority.gv.at/>.

Evaluation of Visitor Behavior

In the following Privacy Policy, we will inform you on if and how we evaluate the data of your visit to this website. The evaluation is generally made anonymously, and we cannot link to you personally based on your behavior on this website.

You can find out more about how to disagree with the evaluation of visitor data, in the Privacy Policy below.

Google Maps Privacy Policy

On our website we use Google Maps of the company Google Inc. (1600 Amphitheatre Parkway Mountain View, CA 94043, USA). With the use of Google Maps, we can show you locations in a better way and can therefore adjust our service to your needs. Due to the utilization of Google Maps, data gets transferred to Google and is saved on Google's servers. In the following, we want to explain in detail what Google Maps is, why we use this Google service, what data is stored and how you can prevent this.

What is Google Maps?

Google Maps is an internet maps service of the company Google Inc. With Google Maps you can search for exact locations of cities, sights, accommodations or businesses online via a PC, a tablet or an app. If businesses are represented on Google My Business, the respective location as well as other information about the company are shown there. In order to show route directions, a location's map sections can be integrated in a website through a HTML-code. Google Maps depicts the earth's surface as either a road map or as air and satellite images. Due to the street view and high-quality satellite images, it is possible for exact representations to be made.

Why do we use Google Maps on our website?

The efforts we make on this page have the goal of giving you a useful and meaningful experience on our website. Through the integration of Google Maps, we can offer you essential information on various locations. Therefore, you can spot our office address with one glance. Furthermore, the route directions always show you the best and fastest way to us. You can retrieve the route directions for traveling either by car, by public transport, on foot or by bike. The integration of Google Maps is a part of our customer service.

What data is stored by Google Maps?

For Google Maps to offer its full services, the company must collect and store your data. This includes your entered search terms, your IP-address as well as your longitude and latitude coordinates. When you use the route-planner function, the entered start address is stored also. However, this data retention happens on Google Maps' websites. We can only inform you about it but cannot influence it in any way. Since we have included Google Maps on our website, Google will set at least one cookie (Name: NID) into your browser. This cookie saves data on your user behaviour. Google primarily uses this data to optimise its own services and to provide you with individual, personalised advertisements.

The following cookies are set in your browser due to the integration of Google Maps:

Name: NID

Value: 188=h26c1Ktha7fCQTx8rXgLyATyITJ121454831-5

Purpose: Google uses NID in order to adjust advertisements to your Google searches. With the cookie's help Google "remembers" your most frequently entered search queries or your

previous interaction with ads. That way you always receive customised advertisements. The cookie contains a unique ID, which Google uses to collect your personal settings for advertising purposes.

Expiration date: after 6 months

Note: We cannot guarantee completeness of the information on saved data. This is, because especially concerning the use of cookies, changes can happen anytime. To identify the cookie NID, a test page was created, to which Google Maps was included.

How long and where is the data saved?

There are Google servers in data centres across the entire planet. However, most servers are in America. For this reason, your data is widely stored in the USA. Here you can read in detail about where the Google servers are

located: <https://www.google.com/about/datacenters/inside/locations/?hl=en>

Google distributes data to various data carriers. This makes it possible to retrieve the data faster and to better protect it from possible attempted manipulations. Every server has emergency programs. Thus, should for example a problem with Google's hardware occur or should a natural disaster impact the servers, any data will quite certainly stay protected.

Moreover, Google saves some data for a specified period. With some other data on the other hand, Google only offers the opportunity for deleting it manually. Furthermore, the company anonymizes information (e.g. advertising data) in server logs, by deleting a part of the IP-address and cookie information after 9 to 18 months.

How can I delete my data, or prevent data retention?

Due to the automatic delete function for location and activity data, which was introduced in 2019, information that is used for determining your location and web or app activity is saved for either 3 or 18 months, depending on your preferred decision, and is deleted thereafter.

Furthermore, it is possible to delete this data manually from your browser history via your Google account anytime. If you want to prevent the determination of your location altogether, you must pause the category “Web and app activity” in your Google account. Click on “Data and personalization” and then choose the option “Activity controls”. Here you can switch the activities on or off.

Moreover, in your browser you can deactivate, delete or manage individual cookies. This function can differ a little, depending on what browser you are using. The following instructions will show you how to manage cookies in your browser:

[Chrome: Clear, enable and manage cookies in Chrome](#)

[Safari: Manage cookies and website data in Safari](#)

[Firefox: Clear cookies and site data in Firefox](#)

[Internet Explorer: Delete and manage cookies](#)

[Microsoft Edge: Delete cookies in Microsoft Edge](#)

If you generally do not want to permit any cookies, you can set up your browser in a way that ensures you get informed whenever a cookie is about to be placed. That way you can decide to either permit or refuse every single cookie.

Google is an active participant of the EU-U.S. Privacy Shield Framework, which regulates the correct and safe transfer of personal data. You can find more information on this on <https://www.privacyshield.gov/participant?id=a2zt000000001L5AAI>.

If you want to find out more about Google's data processing, we recommend the company's internal privacy statement on <https://policies.google.com/privacy?hl=en-GB>.

Google Fonts Privacy Policy

On our website we use Google Fonts, from the company Google Inc. (1600 Amphitheatre Parkway Mountain View, CA 94043, USA).

To use Google Fonts, you must log in and set up a password. Furthermore, no cookies will be saved in your browser. The data (CSS, Fonts) will be requested via the Google domains fonts.googleapis.com and fonts.gstatic.com. According to Google, all requests for CSS and fonts are fully separated from any other Google services. If you have a Google account, you do not need to worry that your Google account details are transmitted to Google while you use Google Fonts. Google records the use of CSS (Cascading Style Sheets) as well as the utilized fonts and stores these data securely. We will have a detailed look at how exactly the data storage works.

What are Google Fonts?

Google Fonts (previously Google Web Fonts) is a list of over 800 fonts which [href="https://en.wikipedia.org/wiki/Google?tid=121454831">Goo](https://en.wikipedia.org/wiki/Google?tid=121454831)gle LLC provides its users for free.

Many of these fonts have been published under the SIL Open Font License, while others have been published under the Apache license. Both are free software licenses.

Why do we use Google Fonts on our website?

With Google Fonts we can use different fonts on our website and do not have to upload them to our own server. Google Fonts is an important element which helps to keep the quality of our website high. All Google fonts are automatically optimized for the web, which saves data volume and is an advantage especially for the use of mobile terminal devices. When you use our website, the low data size provides fast loading times. Moreover, Google Fonts are secure Web Fonts. Various image synthesis systems (rendering) can lead to errors in different browsers, operating systems and mobile terminal devices. These errors could optically distort parts of texts or entire websites. Due to the fast Content Delivery Network (CDN) there are no cross-platform issues with Google Fonts. All common browsers (Google Chrome, Mozilla Firefox, Apple Safari, Opera) are supported by Google Fonts, and it reliably operates on most modern mobile operating systems, including Android 2.2+ and iOS 4.2+ (iPhone, iPad, iPod). We also use Google Fonts for presenting our entire online service as pleasantly and as uniformly as possible.

Which data is saved by Google?

Whenever you visit our website, the fonts are reloaded by a Google server. Through this external cue, data gets transferred to Google's servers. Therefore, this makes Google recognize that you (or your IP-address) is visiting our website. The Google Fonts API was developed to reduce the usage, storage and gathering of end user data to the minimum needed for the proper depiction of

fonts. What is more, API stands for „Application Programming Interface“ and works as a software data intermediary.

Google Fonts stores CSS and font requests safely with Google, and therefore it is protected. Using its collected usage figures, Google can determine how popular the individual fonts are. Google publishes the results on internal analysis pages, such as Google Analytics. Moreover, Google also utilizes data of its own web crawler, in order to determine which websites are using Google fonts. This data is published in Google Fonts' BigQuery database. Entrepreneurs and developers use Google's webservice BigQuery to be able to inspect and move big volumes of data.

One more thing that should be considered, is that every request for Google Fonts automatically transmits information such as language preferences, IP address, browser version, as well as the browser's screen resolution and name to Google's servers. It cannot be clearly identified if this data is saved, as Google has not directly declared it.

How long and where is the data stored?

Google saves requests for CSS assets for one day in a tag on their servers, which are primarily located outside of the EU. This makes it possible for us to use the fonts by means of a Google stylesheet. With the help of a stylesheet, e.g. designs or fonts of a website can get changed swiftly and easily.

Any font related data is stored with Google for one year. This is because Google's aim is to fundamentally boost websites' loading times. With millions of websites referring to the same fonts, they are buffered after the first visit and instantly reappear on any other websites that are visited thereafter. Sometimes Google updates font files to either reduce the data sizes, increase the language coverage or to improve the design.

How can I delete my data or prevent it being stored?

The data Google stores for either a day or a year cannot be deleted easily. Upon opening the page this data is automatically transmitted to Google. In order to clear the data ahead of time, you have to contact Google's support at <https://support.google.com/?hl=en-GB&tid=121454831>. The only way for you to prevent the retention of your data is by not visiting our website.

Unlike other web fonts, Google offers us unrestricted access to all its fonts. Thus, we have a vast sea of font types at our disposal, which helps us to get the most out of our website. You can find out more answers and information on Google Fonts at <https://developers.google.com/fonts/faq?tid=121454831>. While Google does address relevant elements on data protection at this link, it does not contain any detailed information on data retention.

It proves rather difficult to receive any precise information on stored data by Google.

On <https://policies.google.com/privacy?hl=en-GB> you can read more about what data is generally collected by Google and what this data is used for.

WP Statistics Privacy Policy

On our website we use the analysis plugin WP Statistics. This plugin has been developed by the American software company Veronalabs (5460 W Main St, Verona, NY 13478, United States). The plugin allows us to receive simple statistics on how you as a user interact with our website. In this privacy policy we will go into more detail about the analysis tool and show you where and for how long your data is stored.

What is WP Statistics?

This plugin is an analysis software which was specially developed for websites that use the WordPress content management system. WordPress helps us to easily edit our website even without any programming knowledge. WP Statistics may for example collect data about how long you stay on our website, what subpages you visit, how many visitors are on our website or which website led you to us. Furthermore, WP Statistics does not set any cookies and you cannot be personally identified by the collected data.

Why do we use WP Statistics?

With the help of WP Statistics, we obtain simple statistics that help us to continuously improve and make our website even more interesting for you. Our website and the content, products and/or services offered on it should meet your needs and demands as closely as possible. In order to achieve this goal, we of course have to find out where there is room for improvements and changes. The statistics obtained help us to get one step closer to this goal.

Which data is stored by WP Statistics?

WP Statistics does not set any cookies and the collected data are only used to generate anonymized statistics on the use of our website. WP Statistics also anonymises your IP address. You cannot be identified as a person.

WP Statistics collects visitor data when your web browser connects to our web server. These data are then stored in our server's database. The retained data may for example be:

- the address (URL) of the accessed website

- browser and browser version
- the operating system used
- the address (URL) of the previously visited page (referrer URL)
- the hostname and IP address of the device from which our website was accessed
- date and time
- information on the country/city
- number of visitors that come from a search engine
- duration of the website stay
- clicks on the website

Your data will not be passed on or sold.

How long and where are the data stored?

All data is retained locally on our web server. Your data will be stored on our web server until it is no longer needed for the purposes listed above.

How can I delete my data or prevent data retention?

You have the right to information, rectification, deletion or restriction of the processing of your personal data at any time. Moreover, you can revoke your consent to the data processing anytime.

We have now given you the most important information about data processing by WP Analytics. Your data is handled very carefully, as the plugin does not use cookies and the data for statistical analyses are stored locally on our web server. If you want to learn more about WP Analytics, you can view the company's privacy policy at <https://wp-statistics.com/privacy-and-policy/>.

Newsletter Privacy Policy

When you subscribe to our Newsletter you submit your personal data and give us the right to contact you via email. We use the data that is stored for the registration for the Newsletter exclusively for our Newsletter and do not pass them on.

If you unsubscribe from the newsletter – for which you can find a link in the bottom of every newsletter – we will delete all data that was saved when you registered for the newsletter.

Embedded Social Media elements Privacy Policy

We have embedded elements from social media services on our website, to display pictures, videos and texts. By visiting pages that present such elements, data is transferred from your browser to the respective social media service, where it is stored. We do not have access to this data.

The following links lead to the respective social media services' sites, where you can find a declaration on how they handle your data:

- Instagram Data
Policy: <https://help.instagram.com/519522125107875>
- For YouTube, the Google Privacy Policy applies: <https://policies.google.com/privacy?hl=en-GB>
- Facebook Data
Policy: <https://www.facebook.com/about/privacy>
- Twitter Privacy Policy: <https://twitter.com/en/privacy>

Facebook Data Policy

We use selected Facebook tools on our website. Facebook is a social media network of the company Facebook Ireland Ltd., 4 Grand Canal Square, Grand Canal Harbour, Dublin 2 Ireland. With

the aid of this tool we can provide the best possible offers to you and anyone interested in our products and services. In the following we will give you an overview on the different Facebook tools, as well as on what data is sent to Facebook and how you can delete these data.

What are Facebook tools?

Along with many other products, Facebook also offers so called “Facebook Business Tools”. This is Facebook’s official name for the tools, but it is not very common. Therefore, we decided to merely call them “Facebook tools”. They include the following:

- Facebook-Pixel
- social plugins (e.g. the “Like” or “Share” button)
- Facebook Login
- Account Kit
- APIs (application programming interface)
- SDKs (Software development kits)
- Platform-integrations
- Plugins
- Codes
- Specifications
- Documentations
- Technologies and Services

With these tools Facebook can extend its services and is able to receive information on user activities outside of Facebook.

Why do we use Facebook tools on our website?

We only want to show our services and products to people who are genuinely interested in them. With the help of advertisements (Facebook Ads) we can reach exactly these people. However, to be able to show suitable adverts to users, Facebook requires

additional information on people's needs and wishes. Therefore, information on the user behavior (and contact details) on our website, are provided to Facebook. Consequently, Facebook can collect better user data and is able to display suitable adverts for our products or services. Thanks to the tools it is possible to create targeted, customized ad campaigns of Facebook.

Facebook calls data about your behavior on our website "event data" and uses them for analytics services. That way, Facebook can create "campaign reports" about our ad campaigns' effectiveness on our behalf. Moreover, by analyses we can get a better insight in how you use our services, our website or our products. Therefore, some of these tools help us optimize your user experience on our website. With the social plugins for instance, you can share our site's contents directly on Facebook.

What data is saved by the Facebook tools?

With the use of the Facebook tools, personal data (customer data) may be sent to Facebook. Depending on the tools used, customer data such as name, address, telephone number and IP address may be transmitted.

Facebook uses this information to match the data with the data it has on you (if you are a Facebook member). However, before the customer data is transferred to Facebook, a so called "Hashing" takes place. This means, that a data record of any size is transformed into a string of characters, which also has the purpose of encrypting data.

Moreover, not only contact data, but also "event data" is transferred. These data are the information we receive about you on our website. To give an example, it allows us to see what subpages you visit or what products you buy from us. Facebook does not disclose the obtained information to third parties (such

as advertisers), unless the company has an explicit permission or is legally obliged to do so. Also, “event data” can be linked to contact information, which helps Facebook to offer improved, customized adverts. Finally, after the previously mentioned matching process, Facebook deletes the contact data.

To deliver optimized advertisements, Facebook only uses event data, if they have been combined with other data (that have been collected by Facebook in other ways). Facebook also uses event data for the purposes of security, protection, development and research. Many of these data are transmitted to Facebook via cookies. Cookies are little text files, that are used for storing data or information in browsers. Depending on the tools used, and on whether you are a Facebook member, a different number of cookies are placed in your browser. In the descriptions of the individual Facebook tools we will go into more detail on Facebook cookies. You can also find general information about the use of Facebook cookies at <https://www.facebook.com/policies/cookies>.

How long and where are the data saved?

Facebook fundamentally stores data, until they are no longer of use for their own services and products. Facebook has servers for storing their data all around the world. However, customer data is cleared within 48 hours after they have been matched with their own user data.

How can I delete my data or prevent data retention?

In accordance with the General Data Protection Regulation (GDPR) you have the right of information, rectification, transfer and deletion of your data.

The collected data is only fully deleted, when you delete your entire Facebook account. Deleting your Facebook account works as follows:

- 1) Click on settings in the top right side in Facebook.
- 2) Then, click “Your Facebook information” in the left column.
- 3) Now click on “Deactivation and deletion”.
- 4) Choose “Permanently delete account” and then click on “Continue to account deletion”.
- 5) Enter your password, click on “continue” and then on “Delete account”.

The retention of data Facebook receives via our site is done via cookies (e.g. with social plugins), among others. You can deactivate, clear or manage both all and individual cookies in your browser. How this can be done differs depending on the browser you use. The following instructions show, how to manage cookies in your browser:

[Chrome: Clear, enable and manage cookies in Chrome](#)

[Safari: Manage cookies and website data in Safari](#)

[Firefox: Clear cookies and site data in Firefox](#)

[Internet Explorer: Delete and manage cookies](#)

[Microsoft Edge: Delete cookies in Microsoft Edge](#)

If you generally do not want to allow any cookies at all, you can set up your browser to notify you whenever a cookie is about to

be set. This gives you the opportunity to decide upon the permission or deletion of every single cookie.

Facebook is an active participant in the EU-U.S. Privacy Shield Framework, which regulates correct and secure transfer of personal data. You can find more information at <https://www.privacyshield.gov/participant?id=a2zt0000000GnywAAC>. We hope we could give you an understanding of the most important information about the use of Facebook tools and data processing. If you want to find out more on how Facebook use your data, we recommend reading the data policies at <https://www.facebook.com/about/privacy/update>.

Facebook Social Plugins Privacy Policy

We installed so-called social plugins from Facebook Inc. to our website. You can recognise these buttons by the classic Facebook logo, the “Like” button (hand with raised thumb) or by a “Facebook plugin” label. A social plugin is a small part of Facebook that is integrated into our page. Each plugin has its own function. The most used functions are the well-known “Like” and “Share” buttons.

Facebook offers the following social plugins:

- “Save” button
- “Like” button, Share, Send and Quote
- Page plugin
- Comments
- Messenger plugin
- Embedded posts and video player
- Group Plugin

At <https://developers.facebook.com/docs/plugins> you will find more information on how the individual plugins are used. On the

one hand, we use the social plug-ins to offer you a better user experience on our site, and on the other hand because Facebook can optimize our advertisements with it.

If you have a Facebook account or have already visited [facebook.com](https://www.facebook.com), Facebook has already placed at least one cookie in your browser. In this case, your browser sends information to Facebook via this cookie as soon as you visit our website or interact with social plugins (e.g. the “Like” button).

The received information will be deleted or anonymized within 90 days. According to Facebook, this data includes your IP address, the websites you have visited, the date, time and other information relating to your browser.

In order to prevent Facebook from collecting much data and matching it with your Facebook data during your visit to our website, you must log out of Facebook while you visit our website.

If you are not logged in to Facebook or do not have a Facebook account, your browser sends less information to Facebook because you have fewer Facebook cookies. Nevertheless, data such as your IP address or which website you are visiting can be transmitted to Facebook. We would like to explicitly point out that we do not know what exact data is collected. However, based on our current knowledge, we want to try informing you as best we can about data processing. You can also read about how Facebook uses the data in the company’s data policy at <https://www.facebook.com/about/privacy/update>.

At least the following cookies are set in your browser when you visit a website with social plugins from Facebook:

Name: dpr

Value: no information

Purpose: This cookie is used to make the social plugins work on our website.

Expiry date: after end of session

Name: fr

Value: 0jiejyh4121454831c2GnlufEJ9..Bde09j...1.0.Bde09j

Purpose: The cookie is also necessary for the plugins to function properly

Expiry date: after 3 months

Note: These cookies were set after our test and may be placed even if you are not a Facebook member.

If you are registered with Facebook, you can change your settings for advertisements yourself at https://www.facebook.com/ads/preferences/?entry_product=ad_settings_screen. If you are not a Facebook user, you can go to <https://www.youronlinechoices.com/uk/your-ad-choices/> and manage your usage-based online advertising. There you have the option to deactivate or activate providers.

If you want to learn more about Facebook's data protection, we recommend the company's own data policies at <https://www.facebook.com/policy.php>.

Twitter Privacy Policy

We have incorporated Twitter functions on our website. These are, for example, embedded tweets, timelines, buttons or hashtags. Twitter is a short message service and social media platform from the firm Twitter Inc., One Cumberland Place, Fenian Street, Dublin 2 D02 AX07, Ireland.

To our knowledge, in the European Economic Area and Switzerland, a mere integration of the Twitter function does not

transfer any personal data or data about your web activities to Twitter. Only when you interact with the Twitter functions, such as by clicking a button, data could be sent to Twitter and get saved as well as processed there. We have no influence on this processing of data and do not bare any responsibility for it. Within this privacy statement, we want to give you an overview of what data Twitter stores, what Twitter does with this data and how you can largely protect yourself from data transmission.

What is Twitter?

For some, Twitter is a news service, for others, a social media platform, and for others still it is a microblogging service. All these terms are justified and mean pretty much the same.

Both individuals as well as companies use Twitter for communicating with interested people via short messages. Twitter only allows 280 characters per message. These messages are called “tweets”. In contrast to Facebook, for example, the service does not focus on the expansion of a network of “friends”, but strives to be regarded as an open, worldwide news platform. On Twitter you can also have an anonymous account and tweets can be deleted by both, either the company or the users themselves.

Why do we use Twitter on our website?

Like many other websites and companies, we try to use different channels for offering our services and communicating with our customers. Twitter is a truly useful “small” news service, which is why it has grown dear to us. We regularly tweet or retweet exciting, funny or interesting content. We understand that you do not have the time to follow every channel after channel, as you surely have enough other things to do. That is why we also have integrated Twitter functions to our website. That way, you can

experience our Twitter activities “on site” or come to our Twitter page via a direct link. With the integration, we want to strengthen the service and user-friendliness on our website.

What data is stored by Twitter?

You will find integrated Twitter functions on some of our subpages. If you interact with Twitter content, such as by clicking a button, Twitter may collect and save data. This can happen even if you don’t have a Twitter account yourself. Twitter calls this data “log data”. It includes demographic data, browser cookie IDs, your smartphone’s ID, hashed email addresses, and information on which pages you have visited on Twitter and what actions you have taken there. Of course, Twitter stores more data if you have a Twitter account and are logged in. This retention is usually done via cookies. Cookies are small text files that are usually set in your browser and transmit various information to Twitter.

We will now show you which cookies are placed if you are not logged in to Twitter but visit a website with built-in Twitter functions. Please consider this list as an example. We do not claim for this list to be extensive, since the array of cookies always changes and depends on your individual actions with Twitter content.

The following cookies have been used in our test:

Name: personalization_id

Value: “v1_cSJIsogU51SeE121454831”

Purpose: This cookie stores information on how you use the website and what ad may have led you to Twitter.

Expiry date: after 2 years

Name: lang

Value: en

Purpose: This cookie stores your default or preferred language.

Expiry date: after end of session

Name: guest_id

Value: 121454831v1%3A157132626

Purpose: This cookie is set to identify you as a guest.

Expiry date: after 2 years

Name: fm

Value: 0

Purpose: Unfortunately, we could not find out the purpose of this cookie.

Expiry date: after end of session

Name: external_referer

Value: 1214548312beTA0sf5lkMrlGt

Purpose: This cookie collects anonymous data, such as how often you visit Twitter and how long you visit Twitter.

Expiry date: after 6 days

Name: eu_cn

Value: 1

Purpose: This cookie stores user activity and is used for Twitter's various advertising purposes.

Expiry date: after one year

Name: ct0

Value: c1179f07163a365d2ed7aad84c99d966

Purpose: Unfortunately we could not find any information on this cookie.

Expiry date: after 6 hours

Name: _twitter_sess

Value: 53D%253D-dd0248121454831-

Purpose: With this cookie you can use functions within Twitter's

website.

Expiry date: after end of session

Note: Twitter also works with third parties. Therefore, we have recognized the three Google Analytics cookies `_ga`, `_gat`, `_gid` in our test.

On the one hand, Twitter uses the collected data for gaining better understand on user behavior, and thus to improve their own services and advertising offers. On the other hand, the data are also used for internal security measures.

How long and where are the data stored?

When Twitter collects data from other websites, after a maximum of 30 days, they will be deleted, summarized or otherwise concealed. Twitter's servers are in various server centers in the United States. Accordingly, it can be assumed that the gathered data will be collected and stored in America. In our research we could not clearly determine whether Twitter also owns servers in Europe. Generally, Twitter may keep collected data stored until either the data are no longer useful to the company, until you delete the data or until a potential legal deletion period has been reached.

How can I delete my data or prevent data retention?

In their Privacy Policy, Twitter repeatedly emphasize that they do not save data from external website visits, provided you or your browser are in the European Economic Area or Switzerland. However, if you interact directly with Twitter, the company will of course store your data.

If you have a Twitter account, you can manage your data by clicking on "More" under the "Profile" button. Then click on

“Settings and privacy”. Here you can manage data processing individually.

If you do not have a Twitter account, you can go to twitter.com and click “Settings”. At “Personalization and data” you can manage data that is collected on you.

As mentioned above, most data are stored via cookies, which you can manage, deactivate or delete in your browser. Please note that when changing cookie settings in your browser, the edits will only affect that very browser. This means that if you use another browser in the future, you will have to manage your cookie settings there again. In the following you will find instructions for managing cookies in the most popular browsers.

[Chrome: Clear, enable and manage cookies in Chrome](#)

[Safari: Manage cookies and website data in Safari](#)

[Firefox: Clear cookies and site data in Firefox](#)

[Internet Explorer: Delete and manage cookies](#)

[Microsoft Edge: Delete cookies in Microsoft Edge](#)

You can also set your browser to notify you about each individual cookie. This lets you decide individually whether you want to allow or deny a cookie.

Twitter also uses the data for personalized advertising in-and outside of Twitter. You can switch off personalized advertising in the settings under “Personalization and data”. If you use Twitter on a browser, you can deactivate personalized advertising at <http://optout.aboutads.info/?c=2&lang=EN>.

Twitter is an active participant in the EU-U.S. Privacy Shield Framework. This framework ensures correct data transmission between the USA and the European Union. You can learn more about it at <https://www.privacyshield.gov/participant?id=a2zt0000000TO RzAAO>.

We hope we could give you a basic overview of Twitter's data processing. We do not receive any data from Twitter and are not responsible for what Twitter does with your data. If you have any further questions on this topic, we recommend reading Twitter's privacy statement at <https://twitter.com/en/privacy>.

YouTube Privacy Policy

We have integrated YouTube videos to our website. Therefore, we can show you interesting videos directly on our site. YouTube is a video portal, which has been a subsidiary company of Google LLC since 2006. The video portal is operated by YouTube, LLC, 901 Cherry Ave., San Bruno, CA 94066, USA. When you visit a page on our website that contains an embedded YouTube video, your browser automatically connects to the servers of YouTube or Google. Thereby, certain data are transferred (depending on the settings). Google is responsible for YouTube's data processing and therefore Google's data protection applies.

In the following we will explain in more detail which data is processed, why we have integrated YouTube videos and how you can manage or clear your data.

What is YouTube?

On YouTube, users can watch, rate, comment or upload videos for free. Over the past few years, YouTube has become one of the most important social media channels worldwide. For us to be

able to display videos on our website, YouTube provides a code snippet that we have integrated to our website.

Why do we use YouTube videos on our website?

YouTube is the video platform with the most visitors and best content. We strive to offer you the best possible user experience on our website, which of course includes interesting videos. With the help of our embedded videos, we can provide you other helpful content in addition to our texts and images. Additionally, embedded videos make it easier for our website to be found on the Google search engine. Moreover, if we place ads via Google Ads, Google only shows these ads to people who are interested in our offers, thanks to the collected data.

What data is stored by YouTube?

As soon as you visit one of our pages with an integrated YouTube, YouTube places at least one cookie that stores your IP address and our URL. If you are logged into your YouTube account, by using cookies YouTube can usually associate your interactions on our website with your profile. This includes data such as session duration, bounce rate, approximate location, technical information such as browser type, screen resolution or your Internet provider. Additional data can include contact details, potential ratings, shared content via social media or YouTube videos you added to your favorites.

If you are not logged in to a Google or YouTube account, Google stores data with a unique identifier linked to your device, browser or app. Thereby, e.g. your preferred language setting is maintained. However, many interaction data cannot be saved since less cookies are set.

In the following list we show you cookies that were placed in the browser during a test. On the one hand, we show cookies that were set without being logged into a YouTube account. On the other hand, we show you what cookies were placed while being logged in. We do not claim for this list to be exhaustive, as user data always depend on how you interact with YouTube.

Name: YSC

Value: b9-CV6ojl5Y121454831-1

Purpose: This cookie registers a unique ID to store statistics of the video that was viewed.

Expiry date: after end of session

Name: PREF

Value: f1=50000000

Purpose: This cookie also registers your unique ID. Google receives statistics via PREF on how you use YouTube videos on our website.

Expiry date: after 8 months

Name: GPS

Value: 1

Purpose: This cookie registers your unique ID on mobile devices to track GPS locations.

Expiry date: after 30 minutes

Name: VISITOR_INFO01_LIVE

Value: 95Chz8bagyU

Purpose: This cookie tries to estimate the user's internet bandwidth on our sites (that have built-in YouTube videos).

Expiry date: after 8 months

Further cookies that are placed when you are logged into your YouTube account:

Name: APISID

Value: zILlvClZSkqGsSwI/AU1aZl6HY7121454831-

Purpose: This cookie is used to create a profile on your interests. This data is then used for personalised advertisements.

Expiry date: after 2 years

Name: CONSENT

Value: YES+AT.de+20150628-20-0

Purpose: The cookie stores the status of a user's consent to the use of various Google services. CONSENT also provides safety measures to protect users from unauthorised attacks.

Expiry date: after 19 years

Name: HSID

Value: AcRwpgUik9Dveht0l

Purpose: This cookie is used to create a profile on your interests. This data helps to display customised ads.

Expiry date: after 2 years

Name: LOGIN_INFO

Value: AFmmF2swRQlhALl6aL...

Purpose: This cookie stores information on your login data.

Expiry date: after 2 years

Name: SAPISID

Value: 7oaPxoG-pZsJuuF5/AnUdDUlsJ9iJz2vdM

Purpose: This cookie identifies your browser and device. It is used to create a profile on your interests.

Expiry date: after 2 years

Name: SID

Value: oQfNKjAsl121454831-

Purpose: This cookie stores your Google Account ID and your last login time, in a digitally signed and encrypted form.

Expiry date: after 2 years

Name: SIDCC

Value: AN0-TYuqub2JOcDTyL

Purpose: This cookie stores information on how you use the website and on what advertisements you may have seen before visiting our website.

Expiry date: after 3 months

How long and where is the data stored?

The data YouTube receive and process on you are stored on Google's servers. Most of these servers are in America.

At <https://www.google.com/about/datacenters/inside/locations/?hl=en> you can see where Google's data centres are located. Your data is distributed across the servers. Therefore, the data can be retrieved quicker and is better protected against manipulation.

Google stores collected data for different periods of time. You can delete some data anytime, while other data are automatically deleted after a certain time, and still other data are stored by Google for a long time. Some data (such as elements on "My activity", photos, documents or products) that are saved in your Google account are stored until you delete them. Moreover, you can delete some data associated with your device, browser, or app, even if you are not signed into a Google Account.

How can I delete my data or prevent data retention?

Generally, you can delete data manually in your Google account. Furthermore, in 2019 an automatic deletion of location and activity data was introduced. Depending on what you decide on, it deletes stored information either after 3 or 18 months.

Regardless of whether you have a Google account or not, you can set your browser to delete or deactivate cookies placed by Google. These settings vary depending on the browser you use.

The following instructions will show how to manage cookies in your browser:

[Chrome: Clear, enable and manage cookies in Chrome](#)

[Safari: Manage cookies and website data in Safari](#)

[Firefox: Clear cookies and site data in Firefox](#)

[Internet Explorer: Delete and manage cookies](#)

[Microsoft Edge: Delete cookies in Microsoft Edge](#)

If you generally do not want to allow any cookies, you can set your browser to always notify you when a cookie is about to be set. This will enable you to decide to either allow or permit each individual cookie. Since YouTube is a subsidiary company of Google, Google's privacy statement applies to both. If you want to learn more about how your data is handled, we recommend the privacy policy at <https://policies.google.com/privacy?hl=en>.

YouTube Subscribe Button Privacy Policy

We have integrated the YouTube subscribe button to our website, which you can recognize by the classic YouTube logo. The logo shows the words "Subscribe" or "YouTube" in white letters against a red background, with a white "Play" symbol on the left. The button may also be displayed in a different design.

Our YouTube channel consistently offers you funny, interesting or exciting videos. With the built-in "Subscribe" button you can subscribe to our channel directly via our website and do not need to go to YouTube's website for it. With this feature, we want to make it as easy as possible for you to access our comprehensive content. Please note that YouTube may save and process your data.

If you see a built-in subscription button on our page, YouTube sets at least one cookie, according to Google. This cookie stores your IP address and our URL. It also allows YouTube to receive information about your browser, your approximate location and your default language. In our test the following four cookies were placed, without us being logged into YouTube:

Name: YSC

Value: b9-CV6ojl5121454831Y

Purpose: This cookie registers a unique ID, which stores statistics of the viewed video.

Expiry date: after end of session

Name: PREF

Value: f1=50000000

Purpose: This cookie also registers your unique ID. Google uses PREF to get statistics on how you interact with YouTube videos on our website.

Expiry date: after 8 months

Name: GPS

Value: 1

Purpose: This cookie registers your unique ID on mobile devices to track your GPS location.

Expiry date: after 30 minutes

Name: VISITOR_INFO01_LIVE

Value: 12145483195Chz8bagyU

Purpose: This cookie tries to estimate the user's internet bandwidth on our website (that contain built-in YouTube video).

Expiry date: after 8 months

Note: These cookies were set after a test, thus we do not claim for the list to be exhaustive.

If you are logged into your YouTube account, YouTube may store many of the actions and interactions you make on our website via cookies, to then assign them to your YouTube account.

This gives YouTube information on e.g. how long you have been browsing our website, which browser type you use, which screen resolution you prefer or what actions you take.

On the one hand, YouTube uses this data to improve its own services and offers, and on the other hand to provide analyses and statistics for advertisers (who use Google Ads).
